

It is estimated that more than

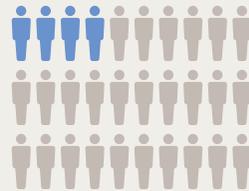

ONE IN EIGHT

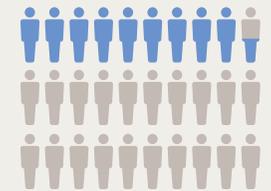

African Americans in Washington, DC has diabetes.*

Diabetes is one of the leading risk factors for **KIDNEY DISEASE** along with high blood pressure, cardiovascular disease, or a family history of kidney failure.

While African Americans made up just **13 percent** of the US population in 2009 ...

... they accounted for **32 percent** of kidney failure cases.**

Kidney disease can progress to kidney failure, which may require treatment with dialysis or a kidney transplant to maintain health longer.

You have the power to protect your kidneys.

- Speak with your health provider and get tested for kidney disease
- Manage your diabetes and high blood pressure
- Share what you've learned with at-risk friends and family members
